

OYERA AUTO SERVICE SYSTEM

OYERA Final Tester and Role Handover Guide

Complete verified acceptance, operating, deployment, evidence, and role instructions

Release branch: feature/uat-handover

Source commit: 61985a3

Generated: 2026-08-05

Acceptance result: 32 / 32 PASS

Document control

Field	Value
System	OYERA Auto Service System
Document	Final Tester and Role Handover Guide

Field	Value
Generated	2026-08-05
Branch	<code>feature/uat-handover</code>
Source commit	<code>61985a3</code>
UAT result	32/32 PASS
Automated tests	826 PASS
Evidence	41 screenshots and 10 CSV files

Purpose and use

This is the authoritative handover guide for testing, demonstrating, operating, deploying, and accepting OYERA.

The tester should not infer missing values or invent test data. Each role section provides the account, exact path, values to enter, expected result, forbidden result, and required evidence.

Demonstration-data warning

The listed usernames and passwords are for local demonstration and UAT only. They are intentionally predictable so that the acceptance suite can be repeated. They are not production credentials.

Verified release status

OYERA Release Validation Record

Item	Verified result
Role-based UAT cases	32 / 32 PASS
Evidence screenshots	41
CSV evidence exports	10
Automated project tests	826 PASS
Django system check	No issues

Item	Verified result
Migration drift check	No changes detected
Ruff linting	PASS
Ruff formatting	PASS
Shell-script syntax checks	PASS
Release branch	<code>feature/uat-handover</code>
UAT source commit	<code>61985a3</code>

The role automation resets the local demonstration database before each role. The final local database reflects the last executed role, while all verified role outcomes remain preserved in the execution ledger and evidence directories.

Security note

All credentials in these guides are demonstration credentials created by `reset_demo_data`. They must never be reused for a production deployment. Production users must receive unique accounts and independently generated passwords.

Exact UAT baseline

OYERA UAT Baseline

This document records the exact database, roles, credentials, permissions, and dashboard links used to begin UAT.

Demo accounts

Role	Username	Password	Login	Dashboard
Administrator	<code>admin</code>	<code>AdminDemo123!</code>	PASS	200
Manager	<code>manager</code>	<code>ManagerDemo123!</code>	PASS	200
Receptionist	<code>receptionist</code>	<code>ReceptionDemo123!</code>	PASS	200
Senior Technician	<code>senior_technician</code>	<code>SeniorTechDemo123!</code>	PASS	200

Role	Username	Password	Login	Dashboard
Technician	technician	TechnicianDemo123!	PASS	200
Cashier	cashier	CashierDemo123!	PASS	200

- `/services/`
- `/vehicles/`
- `/workshop/`

Baseline result

PASS - all six accounts authenticated and all dashboards returned HTTP 200.

Complete role-by-role test casebook

OYERA Role-by-Role User Acceptance Test Casebook

- Generated: 2026-08-04
- Base URL: `http://127.0.0.1:8000`
- Database baseline: `python src/manage.py reset_demo_data --yes`
- Result fields: PASS, FAIL, or BLOCKED

Purpose

This casebook gives the tester exact accounts, paths, input values, expected results, forbidden results, reset steps, and evidence requirements.

Global preparation

1. Keep the backup created before UAT.
2. Run:

```
python src/manage.py reset_demo_data --yes
```
3. Start OYERA:

```
python src/manage.py runserver 127.0.0.1:8000
```
4. Open `http://127.0.0.1:8000`.
5. Use a private browser window or log out between roles.
6. Reset the demo database before beginning each role section.
7. Stop immediately and record a defect if an expected result differs.

Evidence naming

Use:

`UAT-<ROLE>-<CASE>-<short-description>.png`

Capture:

- the browser URL,
- the completed form or resulting record,
- any success or error message,
- the final status,
- downloaded CSV files where required.

Exact demonstration accounts

Role	Username	Password
Administrator	admin	AdminDemo123!
Manager	manager	ManagerDemo123!
Receptionist	receptionist	ReceptionDemo123!
Senior Technician	senior_technician	SeniorTechDemo123!
Technician	technician	TechnicianDemo123!
Cashier	cashier	CashierDemo123!

Resolved seeded scenarios

Scenario	Record	Exact path
Submitted purchase order	DEMO-PO-SUBMITTED	/purchasing/purchase-orders/2/approve/
Reserve stock	UAT 101A	/inventory/requirements/1/reserve/
Issue stock	UAT 202B	/inventory/reservations/1/issue/
Return stock	UAT 303C	/inventory/movements/4/return/
Paid vehicle release	UAT 404D / invoice 1	/jobs/4/release/
Unpaid override release	UAT 505E / invoice 2	/jobs/5/release/
Customer payment	Unpaid invoice 2	/billing/2/payments/new/

Scenario	Record	Exact path
Supplier payment	DEMO-SINV-UNPAID	/purchasing/supplier-invoices/2/payments/new/
Assigned task A	Task 2	/workshop/tasks/2/start/
Assigned task B	Task 3	/workshop/tasks/3/start/

Administrator UAT

Reset the database, then log in as `admin`.

UAT-ADM-01 - Authentication and dashboard

1. Open `http://127.0.0.1:8000/accounts/login/`.
2. Enter `admin`.
3. Enter `AdminDemo123!`.
4. Submit.

Expected:

- Login succeeds.
- Dashboard opens.
- Administration, billing, customers, inventory, jobs, products, purchasing, quotations, reports, services, vehicles, and workshop navigation are visible.

Evidence: dashboard screenshot.

Result: ____

UAT-ADM-02 - Django administration

1. Open `http://127.0.0.1:8000/admin/`.

Expected:

- Django administration index opens.
- The account is recognised as staff and superuser.
- No permission-denied page appears.

Evidence: administration index screenshot.

Result: ____

UAT-ADM-03 - Complete operational reporting

Open each page:

- `/reports/customer-finance/`
- `/reports/workshop-operations/`
- `/reports/inventory-activity/`
- `/reports/purchasing-activity/`

Then download:

- `/reports/customer-finance/export.csv`
- `/reports/workshop-operations/export.csv`
- `/reports/inventory-activity/export.csv`
- `/reports/purchasing-activity/export.csv`

Expected:

- All four report pages open.
- All four CSV responses download.
- CSV files contain headers and seeded rows where applicable.

Evidence: four report screenshots and four CSV files.

Result: ____

UAT-ADM-04 - Approve submitted purchase order

1. Open `/purchasing/purchase-orders/2/approve/` .
2. Confirm the purchase order reference is `DEMO-PO-SUBMITTED` .
3. Tick: `I confirm that I reviewed and approve this purchase order.`
4. Submit.

Expected:

- The purchase order becomes `APPROVED` .
- Approval evidence is recorded.
- The order is no longer awaiting approval.

Evidence: approved purchase-order detail screenshot.

Result: ____

Manager UAT

Reset the database, then log in as `manager` .

UAT-MGR-01 - Authentication and dashboard

Expected:

- Login succeeds.
- Operational modules and reports are visible.
- Django administration is not available as a normal Manager function.

Evidence: dashboard screenshot.

Result: ____

UAT-MGR-02 - Reports and CSV exports

Repeat all report and export URLs from UAT-ADM-03.

Expected:

- All report pages and CSV exports succeed.

Evidence: one screenshot per report and exported files.

Result: ____

UAT-MGR-03 - Approve purchase order

1. Open `/purchasing/purchase-orders/2/approve/`.
2. Confirm `DEMO-PO-SUBMITTED`.
3. Tick the approval confirmation.
4. Submit.

Expected:

- Status becomes `APPROVED`.

Evidence: final status screenshot.

Result: ____

UAT-MGR-04 - Authorise unpaid vehicle release

1. Open `/jobs/5/release/`.
2. Confirm vehicle registration `UAT 505E`.
3. Enter: - Final mileage: `50500` - Final vehicle condition: `Vehicle ready for controlled UAT release.` - Received by: `UAT Manager Receiver` - Receiver contact: `+256700000505` - Handover notes: `Keys and documents handed over during UAT.`
4. Tick: `Authorise release with outstanding balance`.
5. Enter override reason: `Manager-approved UAT customer credit exception.`
6. Submit.

Expected:

- Release succeeds.
- Vehicle/job status becomes **RELEASED**.
- The outstanding invoice remains recorded.
- The override reason and approving Manager are auditable.

Evidence: release-detail screenshot and invoice balance screenshot.

Result: ____

UAT-MGR-05 - Manager cannot enter Django administration

1. Open **http://127.0.0.1:8000/admin/**.

Expected:

- The Django administration index does not open.
- The user is redirected to the admin login page because the Manager is not a staff administrator.

Evidence: redirected URL screenshot.

Result: ____

Receptionist UAT

Reset the database, then log in as **receptionist**.

UAT-REC-01 - Register customer

1. Open **/customers/new/**.
2. Enter: - Customer type: **Individual** - Name: **UAT Reception Customer** - Phone number: **+256700900101** - Email: **uat.reception@example.com** - Address: **Kampala UAT Address** - Notes: **Created during Receptionist UAT.**
3. Save.

Expected:

- Customer is created.
- A customer number is generated.
- Customer detail page opens.

Evidence: completed customer detail screenshot.

Result: ____

UAT-REC-02 - Register vehicle

1. Open `/vehicles/new/`.
2. Select `UAT Reception Customer`.
3. Enter: - Registration number: `UAT 606F` - Category: `Small vehicle` - Make: `Toyota` - Model: `Yaris` - Year: `2021` - Color: `Blue` - Current mileage: `60600` - Fuel type: `Petrol` - Notes: `Created during Receptionist UAT.`
4. Leave engine number, chassis number, and VIN blank.
5. Save.

Expected:

- Vehicle is created and linked to the selected customer.
- Registration displays as `UAT 606F`.

Evidence: vehicle-detail screenshot.

Result: ____

UAT-REC-03 - Open job card

1. Open `/jobs/new/`.
2. Select: - Customer: `UAT Reception Customer` - Vehicle: `UAT 606F`
3. Enter: - Arrival mileage: `60600` - Customer complaint: `Customer reports engine oil warning during UAT.` - Visible condition: `No external damage observed during intake.` - Fuel level: `Half` - Priority: `Normal`
4. Save.

Expected:

- Job card is created with status `OPEN`.
- Customer and vehicle match.
- Mileage is accepted.

Evidence: job-card detail screenshot.

Result: ____

UAT-REC-04 - Release fully paid vehicle

1. Open `/jobs/4/release/`.
2. Confirm registration `UAT 404D`.
3. Enter: - Final mileage: `40400` - Final vehicle condition: `Vehicle clean and ready for customer collection.` - Received by: `UAT Paid Customer` - Receiver contact: `+256700000404` - Handover notes: `Keys and service documents handed over.`
4. Submit.

Expected:

- Release succeeds without an override.
- Job status becomes **RELEASED**.
- A vehicle-release record is created.

Evidence: release-detail screenshot.

Result: ____

UAT-REC-05 - Billing is forbidden

1. Open **http://127.0.0.1:8000/billing/**.

Expected:

- Access Denied page or HTTP **403**.
- No invoice data is displayed.

Evidence: access-denied screenshot.

Result: ____

UAT-REC-06 - Stock reservation is forbidden

1. Open **/inventory/requirements/1/reserve/**.

Expected:

- Access Denied page or HTTP **403**.
- No stock reservation is created.

Evidence: access-denied screenshot.

Result: ____

Senior Technician UAT

Reset the database, then log in as **senior_technician**.

UAT-SEN-01 - Reserve required stock

1. Open **/inventory/requirements/1/reserve/**.
2. Confirm vehicle **UAT 101A**.
3. Select: **OIL-FILTER-001 - Engine oil filter - Main Parts Store**.
4. Enter quantity: **1.000**.
5. Submit.

Expected:

- An active reservation is created.
- Requirement status becomes **RESERVED**.
- Reserved stock increases by **1.000**.

Evidence: requirement and inventory screenshots.

Result: ____

UAT-SEN-02 - Issue reserved stock

1. Open **/inventory/reservations/1/issue/**.
2. Enter: - Quantity: **1.000** - Notes: **Issued during Senior Technician UAT.**
3. Leave occurrence time blank.
4. Submit.

Expected:

- Issue movement is created.
- Reservation becomes partially issued.
- Requirement status becomes **PARTIALLY_ISSUED**.

Evidence: reservation and movement screenshots.

Result: ____

UAT-SEN-03 - Return issued stock

1. Open **/inventory/movements/4/return/**.
2. Enter: - Quantity: **0.500** - Notes: **Unused filter quantity returned during UAT.**
3. Leave occurrence time blank.
4. Submit.

Expected:

- Return movement is created.
- On-hand stock increases by **0.500**.
- Return does not exceed the original **1.500** issue.

Evidence: movement and inventory screenshots.

Result: ____

UAT-SEN-04 - Start, hold, and resume work order

1. Open **/workshop/2/start/** and start the order.
2. Confirm status **IN_PROGRESS**.

3. Open `/workshop/2/hold/` .
4. Enter: `UAT pause while confirming workshop equipment.`
5. Submit and confirm status `ON_HOLD` .
6. Open `/workshop/2/resume/` .
7. Resume and confirm status `IN_PROGRESS` .

Evidence: screenshots of all three statuses.

Result: ____

UAT-SEN-05 - Add workshop note

1. Open `/workshop/tasks/2/notes/new/` .
2. Select note type `Technical` .
3. Enter: `Senior Technician verified the assigned UAT task.`
4. Save.

Expected:

- Append-only task note is visible with author and timestamp.

Evidence: task-note screenshot.

Result: ____

UAT-SEN-06 - Billing is forbidden

1. Open `http://127.0.0.1:8000/billing/` .

Expected:

- Access Denied page or HTTP `403` .

Evidence: access-denied screenshot.

Result: ____

Technician UAT

Reset the database.

Technician preparation by Administrator

Before logging in as Technician:

1. Log in as `admin` .
2. Open `/workshop/2/start/` and start the order.

3. Open `/workshop/3/start/` and start the order.
4. Log out.
5. Log in as `technician`.

UAT-TEC-01 - Assigned-work visibility

Expected:

- Login succeeds.
- Workshop, jobs, quotations, products, services, vehicles, and read-only inventory links are visible.
- Billing, purchasing finance, and reports are not visible.

Evidence: Technician dashboard screenshot.

Result: ____

UAT-TEC-02 - Start and block assigned task

1. Open `/workshop/tasks/2/start/`.
2. Start task `2`.
3. Confirm status `IN_PROGRESS`.
4. Open `/workshop/tasks/2/block/`.
5. Enter: `UAT blocked while awaiting replacement seal.`
6. Submit.

Expected:

- Task status becomes `BLOCKED`.
- Blocking reason, author, and time are recorded.

Evidence: task status screenshot.

Result: ____

UAT-TEC-03 - Complete work and submit for review

1. Open `/workshop/tasks/3/start/`.
2. Start task `3`.
3. Open `/workshop/tasks/3/review/`.
4. Enter completion notes: `Completed oil and filter service, checked for leaks, and verified normal operation during UAT.`
5. Submit.

Expected:

- Task status becomes `AWAITING_REVIEW`.

- Completion notes are retained.
- Technician cannot self-approve the task.

Evidence: awaiting-review screenshot.

Result: ____

UAT-TEC-04 - Task approval is forbidden

1. Open `/workshop/tasks/3/approve/` .

Expected:

- Access Denied page or HTTP `403` .
- Task remains `AWAITING_REVIEW` .

Evidence: access-denied and unchanged-status screenshots.

Result: ____

UAT-TEC-05 - Reports are forbidden

1. Open `/reports/` .

Expected:

- Access Denied page or HTTP `403` .

Evidence: access-denied screenshot.

Result: ____

Cashier UAT

Reset the database, then log in as `cashier` .

UAT-CAS-01 - Finance reporting

Open and test:

- `/reports/customer-finance/`
- `/reports/customer-finance/export.csv`
- `/reports/purchasing-activity/`
- `/reports/purchasing-activity/export.csv`

Expected:

- Both reports open.

- Both CSV files download.
- Workshop and inventory reporting remain unavailable.

Evidence: report screenshots and CSV files.

Result: ____

UAT-CAS-02 - Record customer payment

1. Open `/billing/2/payments/new/`.
2. Confirm the invoice belongs to vehicle `UAT 505E`.
3. Enter: - Amount: `10000.00` - Payment method: `Cash` - External reference: `UAT-CUSTOMER-PAY-001` -
Notes: `Partial customer payment recorded during UAT.`
4. Leave payment time blank.
5. Submit.

Expected:

- Payment is created.
- Outstanding balance decreases by `UGX 10000.00`.
- Payment appears in invoice history.

Evidence: invoice balance and payment screenshots.

Result: ____

UAT-CAS-03 - Record supplier payment

1. Open `/purchasing/supplier-invoices/2/payments/new/`.
2. Confirm supplier invoice reference `DEMO-SINV-UNPAID`.
3. Enter: - Amount: `25000.00` - Method: `Bank transfer` - External reference: `UAT-SUPPLIER-PAY-001` -
Notes: `Partial supplier payment recorded during UAT.`
4. Leave payment time blank.
5. Submit.

Expected:

- Supplier payment is created.
- Supplier invoice becomes partially paid.
- Outstanding supplier balance decreases by `UGX 25000.00`.

Evidence: supplier-invoice and payment screenshots.

Result: ____

UAT-CAS-04 - Workshop report is forbidden

1. Open `/reports/workshop-operations/`.

Expected:

- Access Denied page or HTTP `403`.

Evidence: access-denied screenshot.

Result: ____

UAT-CAS-05 - Inventory report is forbidden

1. Open `/reports/inventory-activity/`.

Expected:

- Access Denied page or HTTP `403`.

Evidence: access-denied screenshot.

Result: ____

UAT-CAS-06 - Vehicle release is forbidden

1. Open `/jobs/4/release/`.

Expected:

- Access Denied page or HTTP `403`.
- No vehicle-release record is created.

Evidence: access-denied screenshot.

Result: ____

Final UAT acceptance

The UAT cycle passes only when:

- all allowed cases succeed,
- all forbidden cases return access denial,
- no unexpected `400`, `404`, or `500` response occurs,
- all evidence files are captured,
- every failed case has an issue reference,
- the database can be reset to the original demonstration baseline.

Verified UAT execution ledger

OYERA UAT Execution Results

- Execution date: 2026-08-04
- Environment: Local development UAT database
- Casebook: `docs/uat/role-uat-casebook.md`
- Status values: PASS, FAIL, BLOCKED, NOT RUN

Administrator

Case	Status	Evidence	Issue	Notes
UAT-ADM-01	PASS	<code>evidence/administrator/UAT-ADM-01-dashboard.png</code>		Automated Chrome login and dashboard navigation verification passed.
UAT-ADM-02	PASS	<code>evidence/administrator/UAT-ADM-02-django-admin.png</code>		Django staff and superuser access passed.
UAT-ADM-03	PASS	<code>evidence/administrator/</code> and <code>evidence/csv/</code>		Four report pages and four authenticated CSV exports passed.
UAT-ADM-04	PASS	<code>evidence/administrator/UAT-ADM-04-purchase-order-approved.png</code>		DEMO-PO-SUBMITTED changed to APPROVED with administrator audit evidence.

Manager

Case	Status	Evidence	Issue	Notes
UAT-MGR-01	PASS	evidence/manager/UAT-MGR-01-dashboard.png		Automated Manager login and dashboard verification passed.
UAT-MGR-02	PASS	evidence/manager/ and evidence/csv/		Four Manager report pages and four CSV exports passed.
UAT-MGR-03	PASS	evidence/manager/UAT-MGR-03-purchase-order-approved.png		DEMO-PO-SUBMITTED was approved by manager.
UAT-MGR-04	PASS	evidence/manager/UAT-MGR-04-unpaid-release-approved.png		UAT 505E was released with a Manager payment override and outstanding balance.
UAT-MGR-05	PASS	evidence/manager/UAT-MGR-05-admin-denied.png		Manager was redirected to the Django admin login page.

Receptionist

Case	Status	Evidence	Issue	Notes
UAT-REC-01	PASS	evidence/receptionist/UAT-REC-01-customer-created.png		Customer was created with a generated customer number.
UAT-REC-02	PASS	evidence/receptionist/UAT-REC-02-vehicle-created.png		UAT 606F was registered to the new customer.
UAT-REC-03	PASS	evidence/receptionist/UAT-REC-03-job-card-created.png		An OPEN job card was created for UAT 606F.
UAT-REC-04	PASS	evidence/receptionist/UAT-REC-04-paid-release.png		Fully paid UAT 404D was released without a payment override.
UAT-REC-05	PASS	evidence/receptionist/UAT-REC-05-billing-denied.png		Receptionist billing access correctly returned HTTP 403.
UAT-REC-06	PASS	evidence/receptionist/UAT-REC-06-stock-reservation-denied.png		Receptionist stock-reservation access correctly returned HTTP 403.

Senior Technician

Case	Status	Evidence	Issue	Notes
UAT-SEN-01	PASS	<code>evidence/senior-technician/UAT-SEN-01-stock-reserved.png</code>		UAT 101A stock was reserved by senior_technician.
UAT-SEN-02	PASS	<code>evidence/senior-technician/UAT-SEN-02-stock-issued.png</code>		UAT 202B reservation became PARTIALLY_ISSUED.
UAT-SEN-03	PASS	<code>evidence/senior-technician/UAT-SEN-03-stock-returned.png</code>		A 0.500 stock return was recorded for UAT 303C.
UAT-SEN-04	PASS	<code>evidence/senior-technician/UAT-SEN-04a-work-order-started.png</code> , <code>UAT-SEN-04b-work-order-held.png</code> , and <code>UAT-SEN-04c-work-order-resumed.png</code>		UAT 202B completed the start, hold, and resume cycle.
UAT-SEN-05	PASS	<code>evidence/senior-technician/UAT-SEN-05-technical-note-added.png</code>		An append-only TECHNICAL task note was recorded.
UAT-SEN-06	PASS	<code>evidence/senior-technician/UAT-SEN-06-billing-denied.png</code>		Senior Technician billing access correctly returned HTTP 403.

Technician

Case	Status	Evidence	Issue	Notes
UAT-TEC-01	PASS	<code>evidence/technician/UAT-TEC-01-dashboard.png</code>		Technician login and assigned-work navigation passed.
UAT-TEC-02	PASS	<code>evidence/technician/UAT-TEC-02-task-blocked.png</code>		Assigned UAT 202B task was started and blocked with an auditable reason.
UAT-TEC-03	PASS	<code>evidence/technician/UAT-TEC-03-task-awaiting-review.png</code>		Assigned UAT 303C task was submitted with completion evidence.
UAT-TEC-04	PASS	<code>evidence/technician/UAT-TEC-04-approval-rejected.png</code>		Technician self-approval was rejected; the task remained AWAITING_REVIEW.
UAT-TEC-05	PASS	<code>evidence/technician/UAT-TEC-05-reports-denied.png</code>		Technician reports access correctly returned HTTP 403.

Cashier

Case	Status	Evidence	Issue	Notes
UAT-CAS-01	PASS	<code>evidence/cashier/</code> and <code>evidence/csv/</code>		Customer-finance and purchasing reports and CSV exports passed.
UAT-CAS-02	PASS	<code>evidence/cashier/UAT-CAS-02-customer-payment.png</code>		A UGX 10000.00 customer payment was recorded by cashier.
UAT-CAS-03	PASS	<code>evidence/cashier/UAT-CAS-03-supplier-payment.png</code>		A UGX 25000.00 supplier payment was recorded by cashier.
UAT-CAS-04	PASS	<code>evidence/cashier/UAT-CAS-04-workshop-report-denied.png</code>		Cashier workshop-report access correctly returned HTTP 403.
UAT-CAS-05	PASS	<code>evidence/cashier/UAT-CAS-05-inventory-report-denied.png</code>		Cashier inventory-report access correctly returned HTTP 403.
UAT-CAS-06	PASS	<code>evidence/cashier/UAT-CAS-06-vehicle-release-denied.png</code>		Cashier vehicle-release access correctly returned HTTP 403.

Database backup and restore guide

OYERA Database Backup and Restore Guide

Purpose

OYERA provides controlled PostgreSQL backup and restoration scripts:

- `scripts/db_backup.sh` creates and validates a backup archive.
- `scripts/db_restore.sh` restores an archive into a controlled target.

Backups may contain employee, customer, supplier, vehicle, financial, inventory, purchasing, and workshop information. They must be treated as confidential.

Required tools

The workstation performing the operation requires:

- `pg_dump`
- `pg_restore`
- `psql`
- `createdb`
- `dropdb`

Application database variables

The scripts use:

- `POSTGRES_DB`
- `POSTGRES_USER`
- `POSTGRES_PASSWORD`
- `POSTGRES_HOST`
- `POSTGRES_PORT`

The host defaults to `127.0.0.1`, and the port defaults to `5432`.

Optional administrator connection

A production application role should not normally require permission to create or delete databases. Database lifecycle operations can therefore use:

- `POSTGRES_ADMIN_HOST`
- `POSTGRES_ADMIN_PORT`
- `POSTGRES_ADMIN_USER`
- `POSTGRES_ADMIN_PASSWORD`

The administrator host and port default to the application database host and port. The administrator user and password default to the application credentials.

The administrator creates the target database and assigns ownership to `POSTGRES_USER`. The archive itself is restored using the application role.

Create a backup

Create a timestamped archive:

```
scripts/db_backup.sh
```

Create an archive at a specific location:

```
scripts/db_backup.sh /secure/location/oyera-production.dump
```

The backup script:

1. Uses PostgreSQL custom format.
2. Excludes ownership and privilege restoration.
3. Writes to a temporary partial file.
4. Validates the archive with `pg_restore --list`.
5. Applies file permission mode `600`.
6. Refuses to overwrite existing archives by default.

Intentional overwrite requires:

```
OYERA_BACKUP_OVERWRITE=true
```

Restore into a separate database

The normal verification method is:

```
scripts/db_restore.sh \
  /secure/location/oyera-production.dump \
  oyera_restore_verification
```

The script validates the archive before creating or replacing a database.

Existing-target protection

Replacing an existing database requires both:

```
OYERA_RESTORE_REPLACE_EXISTING=true
OYERA_RESTORE_CONFIRM_DATABASE=<exact target name>
```

Configured-database protection

Restoring into the database named by `POSTGRES_DB` additionally requires:

```
OYERA_ALLOW_PRODUCTION_RESTORE=true
OYERA_PRODUCTION_RESTORE_CONFIRM=<exact target name>
```

All confirmation values must exactly match the selected target database.

Verification requirements

After restoring into a separate database:

1. Compare public-table counts.
2. Compare Django migration counts.
3. Compare representative business-record counts.
4. Run Django system and migration checks.
5. Test representative role workflows.
6. Delete the verification database after acceptance.

A backup is not considered reliable until a real restoration test succeeds.

Storage rules

- Never commit backup archives to Git.
- Keep credentials outside the scripts.
- Store production backups outside the application server.
- Use approved encrypted storage.
- Restrict access to authorized administrators.
- Define retention and secure-deletion rules.

Production deployment and initial setup

OYERA Production Deployment Guide

Architecture

The production deployment contains three services:

1. `caddy` terminates HTTPS and serves uploaded media.
2. `app` runs Django through Gunicorn as a non-root user.
3. `db` runs PostgreSQL on an internal-only network.

Only Caddy publishes ports to the host. The application and database are not directly exposed to the public network.

Server requirements

Install:

- Docker Engine or Docker Desktop
- Docker Compose
- Git

For a public deployment:

- The domain must resolve to the server.
- TCP ports 80 and 443 must be reachable.
- The server must have persistent storage for Docker volumes.

Create the production environment

Copy the template:

```
cp .env.production.example .env.production
```

Generate three separate secrets:

```
python - <<'PY'
import secrets

for name in (
    "DJANGO_SECRET_KEY",
    "POSTGRES_ADMIN_PASSWORD",
    "POSTGRES_PASSWORD",
):
    print(f"{name}={secrets.token_urlsafe(48)}")
PY
```

Place the generated values in `.env.production`.

Never use the demonstration usernames or passwords in production.

Validate the configuration

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  config --quiet
```

Start the stack

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  up \
  --detach \
  --build
```

The application startup process:

1. Runs the Django system check.
2. Applies database migrations.
3. Collects static files.
4. Starts Gunicorn.

Check service state

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  ps
```

All three services should be running. The database and application should report a healthy status.

Verify health endpoints

```
curl --fail https://your-domain.example/health/live/

curl --fail https://your-domain.example/health/ready/
```

The liveness endpoint confirms that the web process is available. The readiness endpoint also confirms database connectivity.

Inspect logs

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  logs \
  --tail 200
```

Run the deployment security check

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  exec \
  --no-TTY \
  app \
  python src/manage.py check \
  --deploy \
  --fail-level WARNING
```

The command must report no warnings before acceptance.

Create the first administrator

Do not run `reset_demo_data` in production.

Create the initial administrator interactively:

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  exec app \
  python src/manage.py createsuperuser
```

Create ordinary employees through the OYERA employee-management interface and assign each employee the minimum required role.

HSTS rollout

Keep `DJANGO_SECURE_HSTS_SECONDS=0` during initial HTTPS verification.

After HTTPS, proxy handling, the domain, and intended subdomains are verified:

1. Begin with a short HSTS duration.
2. Observe the production deployment.
3. Increase the duration gradually.
4. Enable subdomains only when every subdomain supports HTTPS.
5. Enable preload only after permanent HTTPS readiness is confirmed.

Persistent data

The following Docker volumes contain persistent information:

- `postgres_data`: PostgreSQL database

- `media_data` : user-uploaded files
- `caddy_data` : TLS certificates and Caddy state
- `caddy_config` : Caddy runtime configuration

Do not delete these volumes during routine deployment or shutdown.

Database backup

Create a backup directory:

```
mkdir -p backups
```

Create the database archive:

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  exec \
  --no-TTY \
  app \
  scripts/db_backup.sh \
  /tmp/oyera-production.dump
```

Copy it to the host:

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  cp \
  app:/tmp/oyera-production.dump \
  backups/oyera-production.dump
```

Store database archives as confidential information.

Uploaded media must be backed up separately from PostgreSQL.

Application update

Before every update:

1. Create and validate a database backup.
2. Back up uploaded media.
3. Pull the reviewed release.
4. Rebuild the application image.

5. Verify migrations and service health.
6. Test login and one representative role workflow.

Update command:

```
git pull --ff-only

docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  up \
  --detach \
  --build
```

Stop the deployment

Stop containers while retaining all persistent data:

```
docker compose \
  --env-file .env.production \
  --file compose.production.yml \
  down
```

Never add `--volumes` during routine production shutdown. That option deletes the database, media, and Caddy certificate volumes.

Production deployment validation

OYERA Production Deployment Validation

- Validation date: 2026-08-04
- Runtime: Docker Engine through Colima
- Architecture: ARM64
- Stack: Caddy, Django/Gunicorn, PostgreSQL 17
- Result: PASS

Image validation

- Production image built successfully.
- Image tag: `oyera-auto-service:release-candidate`
- Runtime account: `uid=10001(oyera)`

- The application does not run as root.

Service validation

- PostgreSQL became healthy.
- Django became healthy.
- Caddy started and terminated local HTTPS.
- HTTP redirected to HTTPS.
- Liveness returned HTTP 200.
- Readiness returned HTTP 200 with database status `ok`.

Django validation

- All migrations were applied.
- Static-file collection completed.
- Gunicorn started with two workers.
- The strict deployment check passed with no warnings.
- Hardened HSTS target:
- `SECURE_HSTS_SECONDS=31536000`
- `SECURE_HSTS_INCLUDE_SUBDOMAINS=True`
- `SECURE_HSTS_PRELOAD=True`

Database validation

- Django connected as `oyera_app`.
- Database name: `oyera_service`
- Application role permissions:
- Superuser: false
- Create database: false
- Create role: false
- Replication: false
- Bypass row-level security: false

Storage validation

- Hashed static asset returned HTTP 200.
- Persistent media was written by Django and read through Caddy.
- Temporary media evidence was removed.
- PostgreSQL custom-format backup was created and validated.

Administrator validation

- A production superuser was created through `createsuperuser`.
- The account was active, staff-enabled, and a superuser.
- The temporary audit database and volumes were removed after testing.

Acceptance

PASS - the production container stack satisfies the Phase 17.1 deployment and initial-setup acceptance criteria.

Defect reporting procedure

Use the editable template:

`docs/handover/uat-defect-report-template.md`

OYERA UAT Defect Report

Field	Entry
Defect ID	
Date and time	
Tester	
Role/account	
UAT case	
Environment	
Browser and version	
Page URL	
Severity	Critical / High / Medium / Low
Status	Open / Retest / Closed

Summary

Describe what failed in one sentence.

Exact steps to reproduce

1. 2. 3.

Input values used

Record every value entered by the tester.

Expected result

Copy the expected result from the relevant role guide.

Actual result

Describe the exact visible and stored result.

Evidence

- Screenshot filename:
- CSV filename:
- Server-log extract:
- Relevant database verification:

Reset and retest record

- Demo database reset performed:
- Fix version/commit:
- Retest result:
- Closed by:

Final acceptance checklist

OYERA Final Acceptance Checklist

Technical acceptance

- ☐ Production deployment guide reviewed.
- ☐ Production environment values are unique and secret.
- ☐ HTTPS and domain configuration verified.
- ☐ Database backup created before deployment.

- ☐ Restore procedure tested.
- ☐ Health endpoints return expected results.
- ☐ Static files load correctly.
- ☐ Uploaded media uses persistent storage.
- ☐ All migrations are applied.
- ☐ Production administrator account created securely.

Functional acceptance

- ☐ Administrator guide accepted.
- ☐ Manager guide accepted.
- ☐ Receptionist guide accepted.
- ☐ Senior Technician guide accepted.
- ☐ Technician guide accepted.
- ☐ Cashier guide accepted.
- ☐ All 32 UAT cases reviewed.
- ☐ Evidence files reviewed.
- ☐ Open defects documented and accepted.

Handover acceptance

Responsibility	Name	Signature	Date
Tester			
Business representative			
System owner			
Developer			

Evidence inventory

The master PDF includes all 41 verified screenshots.

The following CSV evidence files are retained in the repository:

- `docs/uat/evidence/csv/UAT-ADM-03-customer-finance.csv`
- `docs/uat/evidence/csv/UAT-ADM-03-inventory-activity.csv`
- `docs/uat/evidence/csv/UAT-ADM-03-purchasing-activity.csv`
- `docs/uat/evidence/csv/UAT-ADM-03-workshop-operations.csv`
- `docs/uat/evidence/csv/UAT-CAS-01-customer-finance.csv`

- `docs/uat/evidence/csv/UAT-CAS-01-purchasing-activity.csv`
- `docs/uat/evidence/csv/UAT-MGR-02-customer-finance.csv`
- `docs/uat/evidence/csv/UAT-MGR-02-inventory-activity.csv`
- `docs/uat/evidence/csv/UAT-MGR-02-purchasing-activity.csv`
- `docs/uat/evidence/csv/UAT-MGR-02-workshop-operations.csv`

Regeneration

Run:

```
DJANGO_SETTINGS_MODULE=config.settings.development \  
PYTHONPATH=src \  
python scripts/generate_handover_package.py
```

The generated PDFs are written to:

`docs/handover/pdf/`

Verified Evidence Gallery

41 non-empty PNG evidence files are included in this guide.
